

**KURRI FFAG MEETING 25/05/2017**  
**BlueJeans VC meeting**

**Attendees:**

S. Sheehy, D. Kelliher, S Machida, C. Prior, C. Rogers - RAL

M. Haj Tahar - Columbia

Y Ishi, T Uesugi, Okito - KURRI

1. KURRI team introduced a new staff member who will be working on RCS for ADS design study for 3 years
2. KURRI machine status update (Ishi-san)
  - Have now succeeding running all 3 tanks at high power, after a fuller operating range scan.
  - Have to do precise alignment of whole linac and re-connect to the ion source. The ion source is in good shape in terms of arc current, vacuum, HV etc...
  - 4 amps for one tank, the resonant frequency of each amp needs to match to the final tank. But these were detuned, and have now been re-tuned.
  - Hopefully within 1-2 weeks they will have beam from the exit of the linac.
  - Planning to turn everything on next week in order to test that the rest of the system works.
3. New FFAG server – need to set up accounts for KURRI side still.
4. Next meeting will be 22<sup>nd</sup> June
